

PST-STD-A-WEB

PST-STD-A-WEB

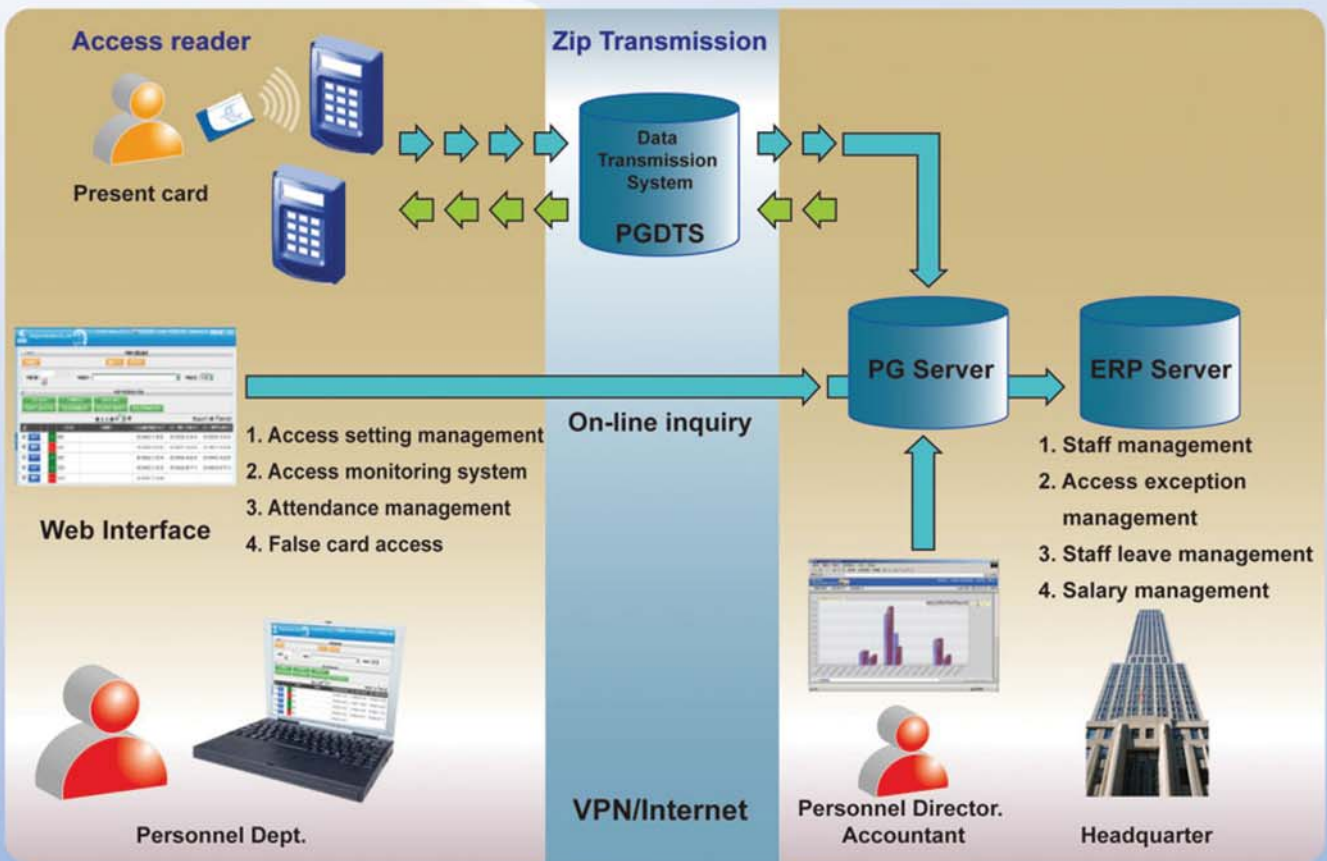

Introduction

Pongee web system developed its own access control central management software based on all Pongee products functions and features. The best advantage is to combine all Pongee access control products into the access control software as control center, which is applied to PP-6750V, PP-85, PP-3702 and PC-1074 series. The software offers personnel and equipment centralized management and the storage of access control, *Microsoft SQL Server data base* as development basis, can be modified according to customer demands to achieve customerized requirements.

Features

- Web-based software supplies users operate on various platforms. No need to pre-install and update it.
- Support Traditional Chinese, Simplified Chinese and English.
- With high stability, it can lower maintenance and operation burden when multiple users use this system simultaneously.
- Simple and friendly operation interface shortens the time on device settings.
- Support e-mail notification. EX: When abnormal situations of device or system occur, or staff forgets to read card, notification mail will be sent out immediately.

Configurations

Access control • Time attendance • Lift control
